## ***Allan Block Engineering Presentation – AB Fence Design Manual***

### **Course Description**

The AB Fence Design Manual presentation is an introductory course on segmental fencing technical information. The intent is to develop a basic understanding of how the system functions and to ensure that these wall structures are properly designed.

Attendees can expect to gain the following skills:

1. Recognize the advantages of a mortarless fence system
2. Describe the principles of fence design
3. Details on the full-scale structural and sound testing
4. Identify the details required to ensure fences are constructed to meet design requirements

### **Ideal Attendee**

Engineers will be exposed to how and where the AB Fence System can be used to solve land usage issues when detailing job site layout and development. Attendee will leave with an understanding of what impacts the fence design as well as the changes within the industry. Additionally, this course is useful for building officials, inspectors and architects who require increased technical knowledge about SRW's.

### **Requirements for Successful Completion**

1. Attendance for entire course
2. Completion of the End-of-Course Assessment

\*IACET CEU's awarded upon successful completion = 0.1
